

Uses microfibers for outstanding cleaning results!

- Cleaning cloth that uses microfibers for special cleaning (dust-free) to further reduce dust.
- For superbly clean results, even when wiping down dry.
- Optical connector cleaner wipes that use microfibers instead of alcohol.
- Generates no dust, simple to use and easy to work with, meaning the same results by anyone.

Why do optical connectors need cleaning?

The ends of optical connectors can get dirty easily, and any dirt on the 10µm diameter optical fiber cores can affect transmissions. There is also the risk of High power light causing damage to the optical fiber end face, so cleaning is required before connections.
