

RGB Color Mixing Unit | SLSI-RGBM

Designed to make various colors by mixing red, green and blue lights with combination of three LED spot illuminations.

- Easily and directly mounted on various lenses.
- Connected to various light guides with adapters. It enables to make various colors in ring and line illuminations.

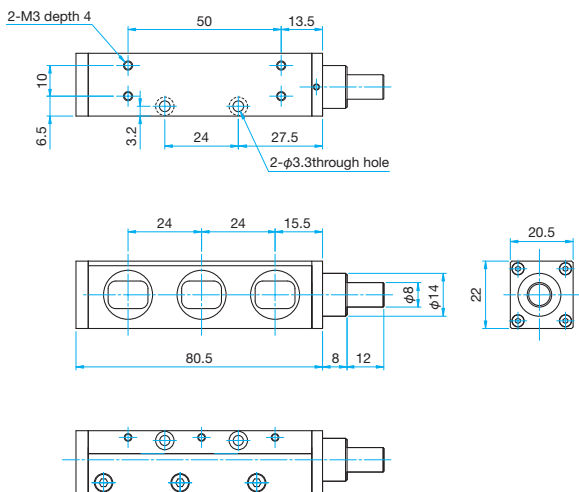

Guide

- ▶ Useful for LED spot illuminations (SLSI).
- ▶ Before mounting on LED spot illuminations, remove the tip portion and check the color position.
- ▶ Various light guides and adapters are available (Optional).
